TEST

Hello, and thanks for comming.

The purpose of this test for us is to know your web integration skills.
Your goal is very simple : reproduce the page in the **screen.png** file.
You will also find a movie about it in differents format to see it in action, in the **screenrecord** files.

This page is as you would see it on January 17th. So the first quizz is ended, the second is available, and the third is disabled yet because of the three quizz dates.
You don't have to handle the facebook thing neither the quizz you will see when you click on the particiapte button. You just have to care about this page.
You will have all the images we used to make this page. Some icons or arrows may be made with FontAwesome.
The whole text of the page is in the txt file, so you will be able to copy paste it.

What we want in order of importance
1. Code quality :
   We're going to work on the same projects. The code quality is very important to us. By quality we mean, structure, organization namings conventions. Take care of using the same naming conventions for all your css class etc.
2. Bootstrap :
   We use bootstrap. You must use this CSS Framework. Version 3 or 4 alpha, as you want. Plus it would be usefull for the responsive part.
3. Appearance :
   Try to approach as possible as the original.
4. Responsive :
   As you see, the example is responsive, try to make the same.
5. SASS :
   We use sass instead of css on all our projects. If you want to use it, that would be a plus, and you will win some time.
6. Javascript :
   As you see the is some javascript managing the numbers on the right as you scoll down to the page and make them selected or not. When you click on it you scoll to the corresponding section.
7. Quizz activations
   A quizz has to be ended if the date has passed, disabled if we have to wait for it, and activate if we can participate to it. You can handle this the way you want, by javascript, or by a php that will generate the page.

We don't :
- We don't care that you finish the entire page. We prefer a beautifull code than a finished job.
- We don't care about other Javascript and CSS libraries that you use. If you like winning some time by using some external libraries, we will like it too.

Good luck !
